

## Patient Details

Name: grhaw erwe  
Age: 23      Gender: Male

## Treatment Recommendations:

- 0: Surgical Resection: Removal of the liver tumor, if feasible.
- 1: Liver Transplant: Considered if resection is not possible or if liver function is severely compromised.
- 2: Ablation Therapy: Using heat or other energy to destroy tumor cells.
- 3: Chemotherapy: Systemic treatment to target cancer cells.
- 4: Targeted Therapy: Drugs that target specific molecules involved in cancer growth.

## Possible Causes:

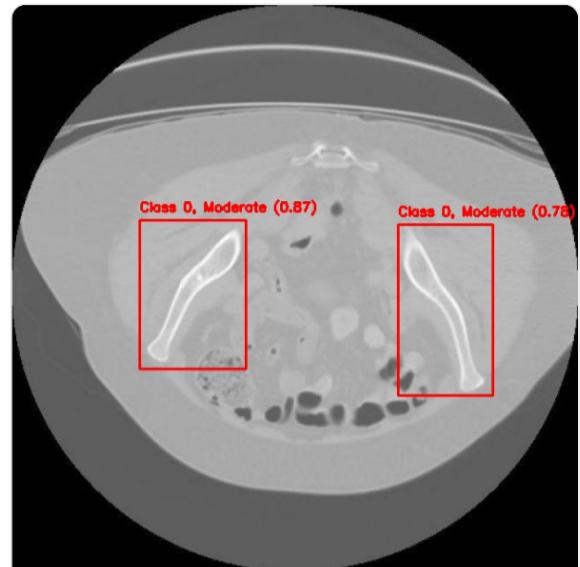

- 0: Hepatitis B Infection: Chronic Hepatitis B infection is a known risk factor for liver cancer.
- 1: Family History of Liver Disease: Genetic predisposition may increase the risk.
- 2: Environmental Factors: Exposure to toxins or carcinogens.
- 3: Other Liver Diseases: Pre-existing liver conditions can increase risk.

## Recommended Blood Tests:

- 0: Liver Function Tests (LFTs): To assess liver health and function.
- 1: Alpha-Fetoprotein (AFP): Tumor marker often elevated in liver cancer.
- 2: Hepatitis B Serology: To confirm and monitor Hepatitis B infection.
- 3: Complete Blood Count (CBC): To assess overall blood health.
- 4: Coagulation Studies: To evaluate blood clotting ability.

## Prescriptions:

- 0: Antiviral Medications: To manage Hepatitis B infection.
- 1: Pain Management Medications: To alleviate pain and discomfort.
- 2: Anti-Nausea Medications: To manage nausea and vomiting associated with treatment.
- 3: Chemotherapeutic Agents: To target and destroy cancer cells.
- 4: Targeted Therapy Agents: To inhibit specific pathways involved in cancer growth.

## Detected Features:

**tumor 1:** Area = 1411.29, Size = 31.75mm x 44.45mm, Shape = elongated (vertical), Location = Lower Left lobe

**tumor 2:** Area = 1445.66, Size = 28.31mm x 51.06mm, Shape = elongated (vertical), Location = Lower Right lobe
