Moderate

Patient Details

Name: JKBUG ,BU

Age: 9 Gender: Male

Treatment Recommendations:

- Chemotherapy:** Consider chemotherapy options based on the type and grade of glioma.
- Radiation Therapy:** Evaluate the need for radiation therapy post-surgery or as a standalone treatment.
- Surgical Intervention:** Consider surgical resection of the glioma if accessible and indicated.

Possible Causes:

- Environmental Factors:** Exposure to certain environmental toxins could contribute to glioma development.
- Genetic Factors:** Family history of neurological diseases may suggest inherited risk factors.

Recommended Blood Tests:

- Complete Blood Count (CBC):** To check for overall health and detect any signs of infection or anemia.
- Tumor Markers:** To identify specific markers associated with gliomas.

Prescriptions:

- Corticosteroids:** To reduce inflammation and manage symptoms associated with tumor pressure.
- Temozolomide:** Common chemotherapy agent used for gliomas.
