

Patient Details

Name: aerlifja awlekfhi

Age: 3 Gender: Female

Treatment Recommendations:

- Antiepileptic Medication:** Initiate treatment with antiepileptic drugs to manage epilepsy.
- Rehabilitation Therapy:** Implement rehabilitation services to assist recovery post-stroke.
- Surgical Intervention:** Consider surgical resection of the meningioma due to its size and location.

Possible Causes:

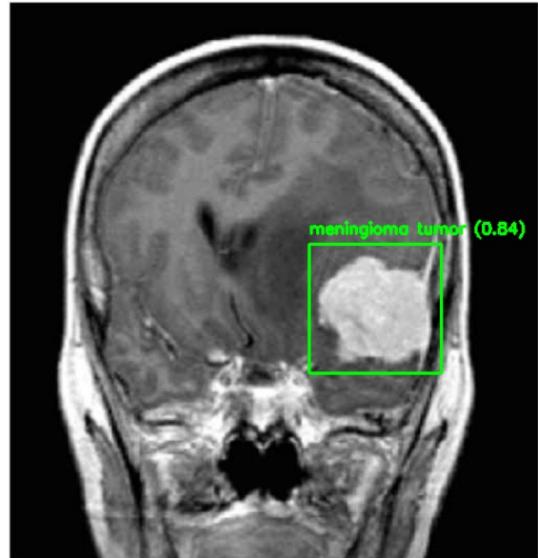

- Environmental Factors:** Exposure to radiation or certain chemicals could be potential risk factors.
- Genetic Factors:** There may be hereditary predispositions contributing to the development of meningiomas.
- Previous Neurological Events:** Prior strokes or other neurological incidents might influence current health issues.

Recommended Blood Tests:

- Coagulation Profile:** To evaluate blood clotting ability, especially post-stroke.
- Complete Blood Count (CBC):** To assess overall health and detect a variety of disorders.
- Electrolyte Panel:** To monitor levels of key electrolytes and assess kidney function.

Prescriptions:

- Aspirin:** To reduce the risk of further strokes.
- Levetiracetam:** Used to control seizures associated with epilepsy.
- Mannitol:** To reduce intracranial pressure if indicated.

Detected Features:

tumor 1: Area = 2.51 mm², Size = 33.26mm x 32.47mm, Shape = elongated (horizontal), Location = middle right
