

Patient Details

Name: Vaishali Chhangani

Age: 45 Gender: Female

Treatment Recommendations:

- Ablation Therapy:** Use thermal ablation techniques for tumor destruction, particularly if surgery is not an option.
- Alcohol Cessation Program:** Implement a program to support cessation of alcohol use to improve liver health.
- Antiviral Therapy:** Administer antiviral medications to manage Hepatitis B infection.
- Surgical Resection:** Consider surgical removal of the liver tumor if operable.

Possible Causes:

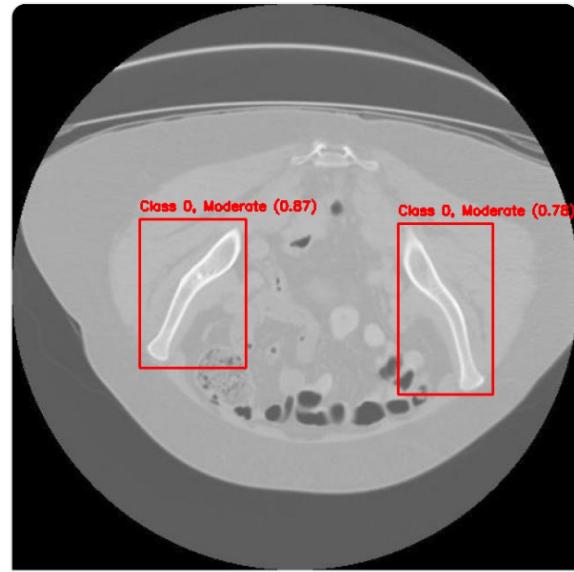

- Chronic Alcohol Use:** Long-term alcohol consumption can contribute to liver disease and tumor formation.
- Hepatitis B Infection:** Chronic Hepatitis B can lead to liver tumors due to ongoing liver damage.
- Liver Cirrhosis:** Cirrhosis from hepatitis or alcohol can increase the risk of liver tumors.

Recommended Blood Tests:

- Alpha-Fetoprotein (AFP) Test:** Check for elevated levels of AFP, which can indicate liver tumors.
- Hepatitis B Viral Load:** Determine the level of Hepatitis B virus in the blood.
- Liver Function Tests:** Assess the overall health of the liver and its ability to function.

Prescriptions:

- Entecavir:** Another antiviral option for Hepatitis B treatment.
- Tenofovir:** Antiviral medication for managing Hepatitis B.
- Vitamin K:** Support liver function and help with clotting issues.

Detected Features:

tumor 1: Area = 1411.29, Size = 31.75mm x 44.45mm, Shape = elongated (vertical), Location = Lower Left lobe

tumor 2: Area = 1445.66, Size = 28.31mm x 51.06mm, Shape = elongated (vertical), Location = Lower Right lobe
