

Patient Details

Name: Vaishali Chhangani

Age: 45 Gender: Female

Treatment Recommendations:

- Follow-up Imaging:** Schedule regular MRI scans to monitor the size of the meningioma.
- Medication for Migraine:** Prescribe medications to manage migraine symptoms.
- Surgical Intervention:** Consider surgical resection of the meningioma if symptomatic.

Possible Causes:

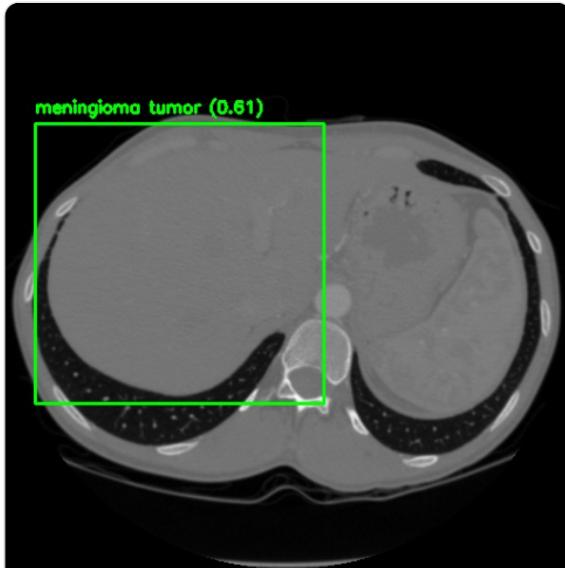

- Environmental Exposures:** Potential exposure to radiation or chemicals linked to tumor formation.
- Genetic Factors:** Inherited mutations that may predispose to meningioma development.
- Hormonal Influences:** Possible hormonal changes that could contribute to tumor growth.

Recommended Blood Tests:

- Complete Blood Count (CBC):** To assess overall health and detect any underlying issues.
- Electrolyte Panel:** To check for imbalances that could affect neurological function.
- Tumor Markers:** To identify any specific markers associated with meningiomas.

Prescriptions:

- Anticonvulsants:** To manage headache symptoms related to the meningioma.
- Beta-blockers:** For migraine prevention.
- Triptans:** For acute migraine relief.

Detected Features:

tumor 1: Area = 12.37 mm², Size = 68.90mm x 66.79mm, Shape = irregular, Location = middle left
