

Patient Details

Name: affe dsf

Age: 2 Gender: Male

Treatment Recommendations:

- Radiation Therapy:** Use targeted radiation therapy to treat the meningioma if surgery is not feasible.
- Rehabilitation Therapy:** Implement rehabilitation programs to address deficits caused by the stroke.
- Surgical Resection:** Consider surgical removal of the meningioma to alleviate pressure and reduce symptoms.

Possible Causes:

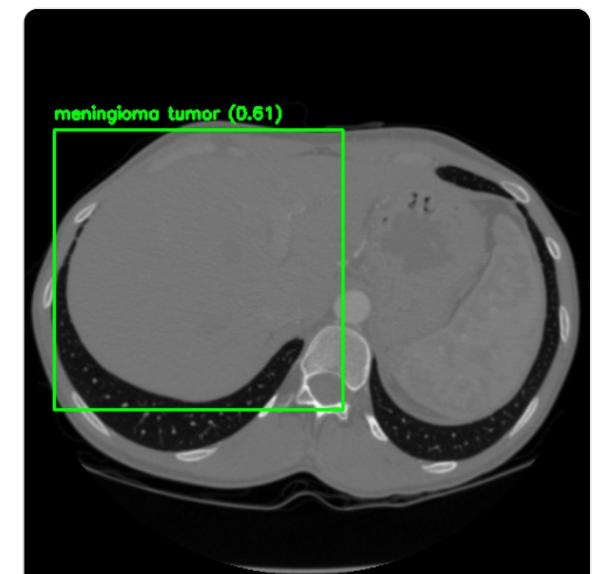

- Environmental Factors:** Exposure to certain environmental factors or radiation may contribute to tumor development.
- Genetic Predisposition:** Inherited genetic factors may increase the risk of developing meningiomas.
- Previous Head Trauma:** History of head injuries can be associated with the development of meningiomas.

Recommended Blood Tests:

- Coagulation Profile:** Evaluate the blood's ability to clot, especially important after a stroke.
- Complete Blood Count (CBC):** Assess overall health and detect a variety of disorders.
- Tumor Markers:** Test for specific markers that may indicate the presence of tumors.

Prescriptions:

- Anti-inflammatory Medications:** To reduce inflammation around the tumor.
- Anticoagulants:** To prevent further clot formation after a stroke.
- Antiepileptic Drugs:** To manage seizures that may arise from the meningioma.

Detected Features:

tumor 1: Area = 12.37 mm², Size = 68.90mm x 66.79mm, Shape = irregular, Location = middle left
