

Patient Details

Name: Vaishali Chhangani

Age: 45 Gender: Female

Treatment Recommendations:

- Management of Hypertension:** Optimize blood pressure control to reduce surgical risks.
- Radiation Therapy:** Adjuvant radiation therapy may be necessary post-surgery to manage residual tumor.
- Surgery:** Consider surgical resection of the meningioma due to its size and severity.

Possible Causes:

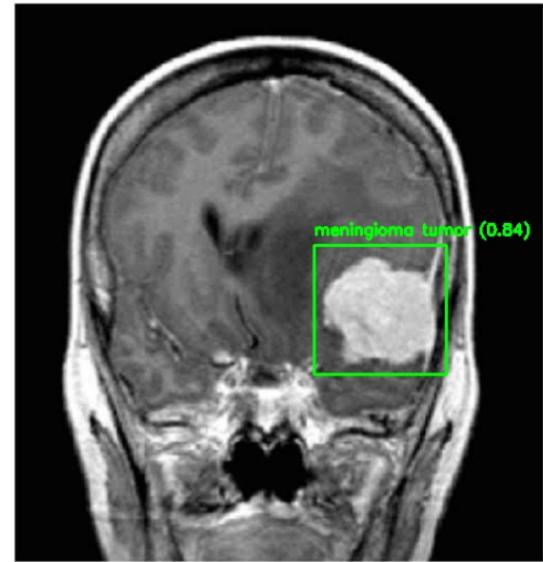

- Environmental Factors:** Exposure to radiation or certain chemicals may increase risk.
- Genetic Factors:** Certain genetic mutations may predispose individuals to meningioma.
- Hormonal Influence:** Estrogen may play a role in the development of meningiomas.

Recommended Blood Tests:

- Complete Blood Count (CBC):** To assess overall health and detect any underlying conditions.
- Electrolytes Panel:** To monitor kidney function and check for imbalances.
- Liver Function Tests:** To evaluate liver health before any surgical interventions.

Prescriptions:

- Anticoagulants:** To prevent blood clots, especially if surgery is indicated.
- Antihypertensive Medication:** To manage and control blood pressure.
- Pain Management Medication:** For postoperative pain relief if surgery is performed.

Detected Features:

tumor 1: Area = 2.51 mm², Size = 33.26mm x 32.47mm, Shape = elongated (horizontal), Location = middle right
